

EcoRaggs®

THE RUGGED APPEARANCE OF these garments is derived from the use of specially spun yarns.

These recycled ragg wool yarns have been partially scoured to retain more of their natural oils that allow them to repel moisture while withstanding winds that blow cold and biting. For the good of the planet and for tough wear and consistent performance, recycled and natural fiber has been blended into this garment.

Imagine! The recycled fiber that comprises 50% of the outer shell of this garment once had a completely different life as a plastic soda bottle. To be exact, each item contains at least one and one half recycled post-consumer plastic soda bottles.

EcoRaggs® items have all the performance features that you expect from today's high tech fabrics: comfort, warmth, easy care, and long lasting durability. They are extremely soft and incredibly light in weight, yet provide excellent insulation in cold weather, even when wet. And of course, you haven't given up anything when it comes to looking great. It's all here ...

Plus the added value of knowing that the apparel you wear allows you to be a friend of the Earth.

652 RUGBY STRIPE:

50% Wool - 50% Recycled Polyester (from post-consumer soda bottles) beanie with recycled EcoEvolution™ fleece lining.

ONE SIZE / Pre-pack of 6

ONE SIZE / Pre-pack of 6
(2) peacoat
(2) charcoal heather
(2) anthracite

3M™ Thinsulate™ Insulation with recycled fibers contains 50% recycled polyester fibers from post-consumer products, giving new life to resources that might otherwise end up in a landfill.

3M manufacturing plants producing Thinsulate™ Insulation recycle 100% of their polyolefin waste material. Excess product is sold to companies and used in many applications, including oil booms, furniture and packaging material.

Recycling helps the environment by reducing the need to manufacture virgin materials, which involves greater energy consumption and more air and water emissions. Purchasing products with recycled content also reduces pressure on virgin resources and reduces waste to landfill.

Buying recycled 'closes the loop' by providing a market outlet for materials saved from landfill. It represents an accessible way to demonstrate environmental leadership.

627 OATMEAL CUFF CAP:
50% Wool - 50% Recycled Polyester (from post-consumer soda bottles) cuff cap with acrylic no-itch lining.

(6) oatmeal ONLY
